

Responsive Layout Design

1. Header

The design elements, including the logo, font, and icons, have been resized for optimal display on smaller screens. This ensures consistent user experience and aesthetics across different device sizes.

2. Navigation Bar

With smaller screen sizes in mind, simply reducing the font size for navigation content might impair visibility and accessibility. To address this, a hamburger menu has been introduced. This menu consolidates the main links that were originally present on the desktop version. To streamline the appearance on smaller screens and prioritize user-friendliness, the dropdown sub-menus have been removed. While these sub-menus are useful for categorization on larger displays, they might become cumbersome on compact screens.

3. Home Page

The primary design change involves transitioning from a vertical to a horizontal layout for smaller displays. Additionally, font sizes have been reduced, and sponsor logos have been downsized to fit more appropriately on smaller screens.

4. Contact Page

The fundamental structure of the contact page remains unchanged. However, refinements include reducing font sizes and scaling down input fields to ensure they appear proportionate and are user-friendly on smaller screens.
